

GRE TUNNEL: VPN

<https://www.youtube.com/@techwithravish>

A **GRE Tunnel** (Generic Routing Encapsulation) is a protocol used to encapsulate various network layer protocols inside a point-to-point tunnel. It is mainly used to connect remote networks over an intermediate network (like the internet) by forming a **virtual point-to-point link** between two routers.

How GRE Tunnel Works: -

<https://www.youtube.com/@techwithravish>

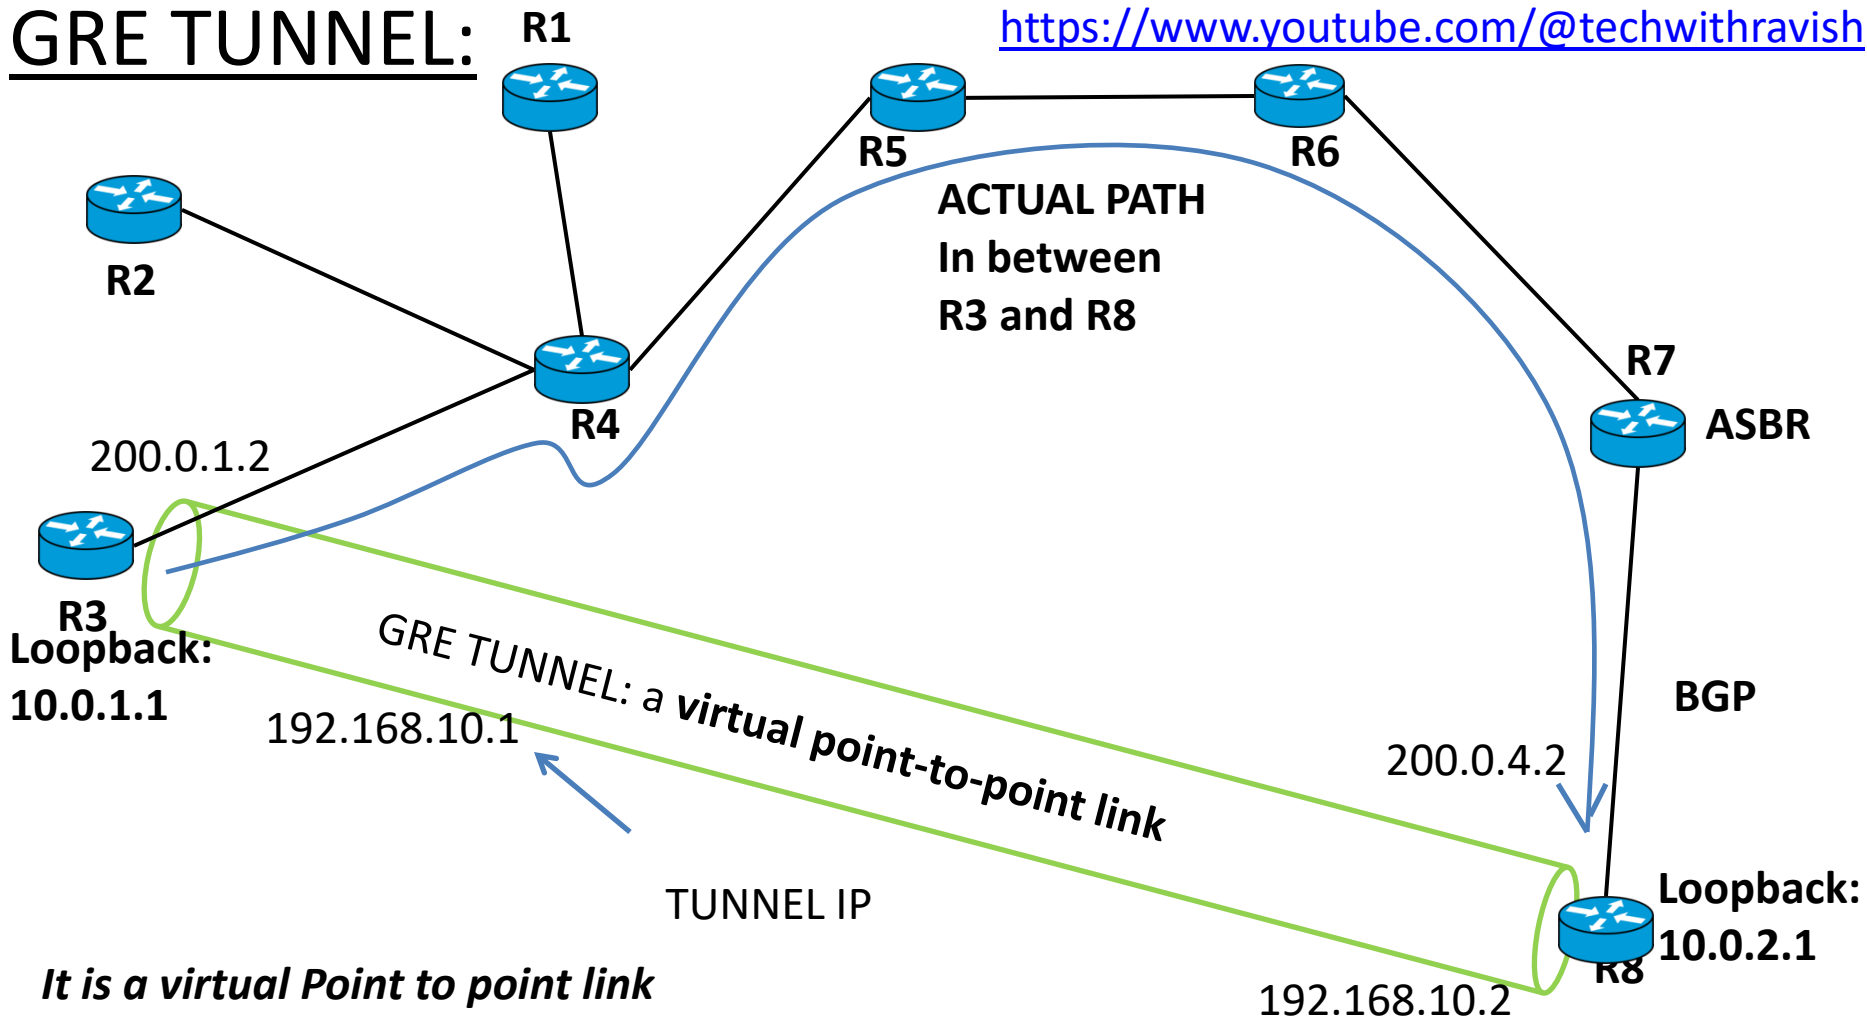

Encapsulation: GRE encapsulates the original IP packet inside another IP packet with a GRE header.

Tunneling: The encapsulated packet is sent over an intermediate network (such as the internet).

Decapsulation: The receiving router removes the GRE header and forwards the original packet to the destination.

GRE TUNNEL:

Configuration of GRE TUNNEL:

<https://www.youtube.com/@techwithravish>

R3(config)#Interface Tunnel 1

R3(config-if)#tunnel source 200.0.1.2

R3(config-if)#tunnel Destination 200.0.4.2

R3(config-if)#ip address 192.168.10.1 255.255.255.0

R8(config)#Interface Tunnel 1

R8(config-if)#tunnel source 200.0.4.2

R8(config-if)#tunnel Destination 200.0.1.2

R8(config-if)#ip address 192.168.10.2 255.255.255.0

Note: Before doing the GRE Configuration please do routing and provide reachability

Configure Neighborhood via Dynamic Route in between Virtual interfaces of Tunnel:

R3(config)#router eigrp 1

R3(config-router)#network 192.168.10.0

R3(config-router)#network 10.0.1.0

R3(config)#router eigrp 1

R3(config-router)#network 192.168.10.0

R3(config-router)#network 10.0.2.0
