

CEH v13 Practice Questions – Module 13: Hacking Web Servers

1. Which of the following is a common vulnerability found in web servers?

- A. Cross-Site Request Forgery
- B. Open Redirect
- C. Directory Traversal
- D. Clickjacking

Answer: C

2. What tool can be used to fingerprint web servers?

- A. Nikto
- B. Nmap
- C. Wappalyzer
- D. All of the above

Answer: D

3. Which HTTP method could allow unauthorized file uploads if not properly secured?

- A. GET
- B. POST
- C. HEAD
- D. TRACE

Answer: B

4. What is the primary goal of exploiting a web server vulnerability?

- A. To fingerprint the operating system
- B. To obtain unauthorized access or disrupt service
- C. To extract DNS records
- D. To sniff traffic from client devices

Answer: B

5. Which tool is specifically designed to identify vulnerabilities in web servers?

- A. John the Ripper
- B. Aircrack-ng
- C. Nikto
- D. Hydra

Answer: C

6. What is the function of the 'Server' header in HTTP responses?

- A. Encrypt the payload
- B. Indicate server software and version
- C. Control session cookies
- D. Block unauthorized access

Answer: B

7. Which attack involves manipulating a web server to access restricted directories?

- A. Clickjacking
- B. Directory Traversal
- C. XSS
- D. Session Hijacking

Answer: B

8. Why is it risky to leave default configurations on web servers?

- A. It reduces performance
- B. It increases bandwidth usage
- C. It exposes known vulnerabilities
- D. It logs too much information

Answer: C

9. Which HTTP method is often disabled to prevent enumeration of server functions?

- A. GET
- B. POST
- C. OPTIONS
- D. HEAD

Answer: C

10. Which scanning tool can detect outdated server software and misconfigurations?

- A. Metasploit
- B. Nikto
- C. Burp Suite
- D. Netcat

Answer: B

11. Which directory structure is commonly targeted in web server attacks?

- A. /var/log
- B. /etc/
- C. /var/www
- D. /boot

Answer: C

12. What role does the web root directory play in a web server?

- A. Stores DNS configurations
- B. Hosts system logs
- C. Contains files accessible over HTTP
- D. Acts as the kernel boot partition

Answer: C

13. What is the purpose of server-side input validation?

- A. To speed up page loading
- B. To block malware downloads
- C. To prevent injection attacks
- D. To optimize DNS queries

Answer: C

14. Which HTTP header can help prevent information disclosure?

- A. Cache-Control
- B. Server
- C. X-Content-Type-Options
- D. Allow

Answer: C

15. Which of the following can indicate the presence of a vulnerable web server?

- A. Lack of SSL certificate
- B. Server disclosing software version
- C. Large favicon.ico file
- D. HTML pages without CSS

Answer: B

16. Which command-line tool can test for banner grabbing on a web server?

- A. curl
- B. ifconfig
- C. traceroute
- D. ping

Answer: A

17. How does a 'web defacement' attack affect a web server?

- A. Slows down traffic
- B. Replaces legitimate content with unauthorized content
- C. Blocks DNS queries
- D. Deletes database tables

Answer: B

18. Which of the following practices enhances web server security?

- A. Enable directory browsing
- B. Disable logging
- C. Regularly apply patches and updates
- D. Allow remote root login

Answer: C

19. What is a virtual host in the context of web servers?

- A. A host with limited network access
- B. A simulated host used for training

- C. A method to host multiple websites on a single server
- D. A DNS sinkhole

Answer: C

20. Which protocol is typically used by web servers to serve encrypted content?

- A. FTP
- B. HTTP
- C. HTTPS
- D. SSH

Answer: C

21. Which file might expose sensitive server configuration settings if accessible?

- A. robots.txt
- B. config.php
- C. favicon.ico
- D. sitemap.xml

Answer: B

22. What is the risk of running a web server as the root user?

- A. It prevents directory traversal
- B. It ensures sandboxing of services
- C. It gives attackers full system control if compromised
- D. It improves compatibility with SSL

Answer: C

23. Which HTTP status code indicates unauthorized access?

- A. 200
- B. 403
- C. 302
- D. 500

Answer: B

24. Which web server software is open-source and widely used?

- A. Microsoft IIS
- B. Apache HTTP Server
- C. WebSphere
- D. NGINX Plus

Answer: B

25. What is the benefit of disabling directory listing on a web server?

- A. Prevents packet fragmentation
- B. Hides the contents of directories from attackers
- C. Encrypts HTTP responses
- D. Speeds up DNS resolution

Answer: B
