

CEH v13 Practice Questions – Module 19: Cloud Computing

1. What is the primary benefit of cloud computing for organizations?

- A. Increased hardware costs
- B. Limited scalability
- C. On-demand resource availability
- D. Fixed resource allocation

Answer: C

2. Which of the following is a common cloud deployment model?

- A. Hybrid
- B. Clustered
- C. Modular
- D. Virtual

Answer: A

3. Which cloud service model provides the highest level of control over resources?

- A. SaaS
- B. PaaS
- C. IaaS
- D. CaaS

Answer: C

4. Which cloud model allows multiple customers to share the same infrastructure?

- A. Private cloud
- B. Public cloud
- C. Community cloud
- D. Internal cloud

Answer: B

5. Which of these is a primary security concern in cloud environments?

- A. Power outages
- B. Shared tenancy
- C. Low storage capacity
- D. Application crashes

Answer: B

6. What is the purpose of a Cloud Access Security Broker (CASB)?

- A. Encrypt cloud storage
- B. Prevent DDOS attacks
- C. Provide visibility and policy enforcement
- D. Manage cloud billing

Answer: C

7. Which term describes a cloud provider's legal responsibility for securing their platform?

- A. SLA
- B. RTO
- C. Shared responsibility model
- D. MTBF

Answer: C

8. Which of the following best defines multitenancy?

- A. Use of multiple accounts in one cloud service
- B. Storing backups in multiple locations
- C. Hosting multiple users on a shared infrastructure
- D. Having many cloud vendors

Answer: C

9. Which service type is exemplified by Google Docs?

- A. IaaS
- B. SaaS
- C. PaaS
- D. NaaS

Answer: B

10. Which security control is essential for cloud-based virtual machines?

- A. Disabling encryption
- B. Logging out manually
- C. Patching and hardening
- D. Lowering firewall settings

Answer: C

11. Which standard focuses on cloud security control implementation?

- A. PCI DSS
- B. ISO/IEC 27017
- C. HIPAA
- D. NIST SP 800-53

Answer: B

12. Which of the following is a cloud-native security risk?

- A. SQL Injection
- B. Misconfigured storage buckets
- C. Brute-force login
- D. Local privilege escalation

Answer: B

13. Which protocol is commonly used for securing API access in cloud applications?

- A. SMTP
- B. SNMP
- C. OAuth
- D. FTP

Answer: C

14. What does the acronym DLP stand for in cloud security?

- A. Data Loss Prevention
- B. Device Locking Protocol
- C. Data Logging Policy
- D. Digital Layer Protection

Answer: A

15. Which logging service is commonly used in AWS for monitoring activities?

- A. CloudWatch
- B. Cloudflare
- C. Azure Sentinel
- D. Nessus

Answer: A

16. What is a risk of improperly managed API keys in the cloud?

- A. Data loss from hardware
- B. Credential leakage and unauthorized access
- C. High latency
- D. Software crashes

Answer: B

17. What role does identity federation play in cloud security?

- A. Backups data to a remote location
- B. Encrypts cloud disks
- C. Allows single sign-on across systems
- D. Restricts API throttling

Answer: C

18. Which of the following is a cloud service attack vector?

- A. Client misconfiguration
- B. Router firmware update
- C. Power line tapping
- D. RAM overflow

Answer: A

19. Which control restricts cloud resource access based on user roles?

- A. RBAC
- B. DHCP

- C. TCP/IP
- D. MAC filtering

Answer: A

20. Why is continuous monitoring important in cloud environments?

- A. To reduce server size
- B. To avoid patching
- C. To detect and respond to threats in real time
- D. To slow down intrusions

Answer: C

21. Which type of encryption protects data stored in the cloud?

- A. TLS
- B. AES
- C. SHA1
- D. MD5

Answer: B

22. Which cloud provider service enables identity management?

- A. IAM
- B. S3
- C. EC2
- D. RDS

Answer: A

23. What is the purpose of cloud security posture management (CSPM)?

- A. Physical security audits
- B. Network monitoring
- C. Identifying misconfigurations and compliance violations
- D. Device tracking

Answer: C

24. Which of the following can mitigate DDoS attacks in cloud?

- A. Role-based access
- B. Distributed logging
- C. Cloud-based load balancers and WAF
- D. Data compression

Answer: C

25. Why is vendor lock-in a concern in cloud computing?

- A. It restricts user roles
- B. It makes migration difficult
- C. It lowers availability
- D. It disables encryption

Answer: B
