

Cluster : Cyber Security (Governance, Operations & Services) and Privacy

Problem Statement title : Consent Management System

Description:

Design a transparent, user-friendly platform that helps individuals track, grant, and revoke consent for data sharing in compliance with India's DPDP Act and global regulations such as GDPR.

Exact Deliverables :

- Prototype consent manager with receipts, purpose binding, and granular revocation.
- SDKs or APIs for integration with web and mobile applications.
- Audit log functionality to demonstrate compliance with DPDP and GDPR.
- Test results showing interoperability across multiple applications.

Milestones, Evolution Parameters:

- Phase 1: Build core consent grant/revoke flow with logging.
- Phase 2: Add purpose binding and interoperability testing across apps.
- Phase 3: Deploy SDK/API prototype for integration into web/mobile apps.
- KPIs: Processing latency, error rate in consent revocation, user satisfaction scores, compliance audit readiness.

Additional Information:

- Teams should emphasize usability—interfaces must be intuitive for non-technical users.
- Lightweight SDKs will enhance adoption across diverse apps.
- Students should study both DPDP (India) and GDPR (EU) to design future-proof solutions.
- Students should consult with governance and regulatory bodies of India to gain clarity and practical guidance.
