

GitHub Commit

1. Create a repo
 - Name
 - Description
 - Private
 - Readme
2. Open Vs Code
 - Clone that repo
 - Cd to that repo
3. Npm init -y (will generate the package.json file)
4. Npm I jsonfile moment (module installation)
5. Npm I simple-git (module installation)
6. Write the code

Package.json (Auto Generated)

```
{
  "name": "snakegame",
  "version": "1.0.0",
  "description": "Python based snake game.",
  "main": "index.js",
  "type": "module",
  "scripts": {
    "test": "echo \"Error: no test specified\" && exit 1"
  },
  "repository": {
    "type": "git",

```

```

index.js (Edit date = const pastDate = moment("2022-12-22T12:00:00").format();))
import jsonfile from "jsonfile";
import moment from "moment";
import simpleGit from "simple-git";
const path = "./data.json";

// Set your desired past date here
// Use moment's format to specify the date and time
const pastDate = moment("2022-12-22T12:00:00").format();

const data = {
  date: pastDate,
};

jsonfile.writeFile(path, data, (err) => {
  if (err) {
    console.error("Error writing to file:", err);
    return;
  }
  console.log(`Successfully wrote date to ${path}`);

  simpleGit()
    .add([path])
    .commit(`Commit for ${pastDate}`, { "--date": pastDate })
    .push()
    .then(() => {
      console.log("Successfully committed and pushed.");
    })
    .catch((gitErr) => {
      console.error("Error with git operations:", gitErr);
    });
});

```

7. Node index.js (Commit the changes)
